01 // AI THAT MAKES THE NEWS

Agents come with consequences

> Amazon, March 2026: 6.3 million orders lost. One agentic deployment

> "A machine cannot be held accountable."
> REPLIT POST-MORTEM

82% DEPLOYING AGENTS

44% HAVE GOVERNANCE

80% UNINTENDED ACTIONS

Can this happen to your org?

02 // THE SHIFT

Your judgment moved upstream

> Agent Owner framework: The 3Cs to remember

CUSTOMER CONTEXT

- What does this action mean to the person on the other end? Urgency, trust, relationship?
- The agent classifies on its own. Only you know what that classification means in the real world.

COST

- What's the business consequence if this door is crossed? Churn, financial exposure, reputational damage.
- How much are you willing to spend on the agent?

COMMUNICATE

- How does the agent escalate, confirm, or act? The spec codifies this in advance.
- Engineers can't write it. Legal sets floors. Only you know what good looks like.

These are the three things no engineer, no legal team, and no CISO can fill in.

03 // THE FRAMEWORK

One-way door. Two-way door.

The hat, the haircut, the tattoo

ONE-WAY

- Sending 10,000 emails (can't unsend)
- Issuing a $5,000 refund (trust event)

TWO-WAY

- Website changes
- Rolling out beta features to a small cohort of users

Anthropic: built their model to prefer reversible actions.

Your role: The spec is how you define what's reversible for your business

LEVEL UP

04 // THE ARTIFACT

Before you deploy

GROUP 1: DOOR MAP

00 //
SCOPE
what the agent does, for whom, and under what conditions

01 //
ACCESS INVENTORY
every system, API, and dataset it can reach

02 //
PERMITTED ACTIONS
what it can do without approval. Two-way doors

03 //
HARD STOPS
what it must never do alone. One-way doors.

GROUP 2: LOCKS

04 //
HANDOFF CONDITIONS
when the agent must pause and yield to a human

05 //
ESCALATION
who holds the key for each one-way door.

06 //
FAILURE STATE
how you know a lock was broken.

04.1 // THE ARTIFACT

Ten fields. Three groups.

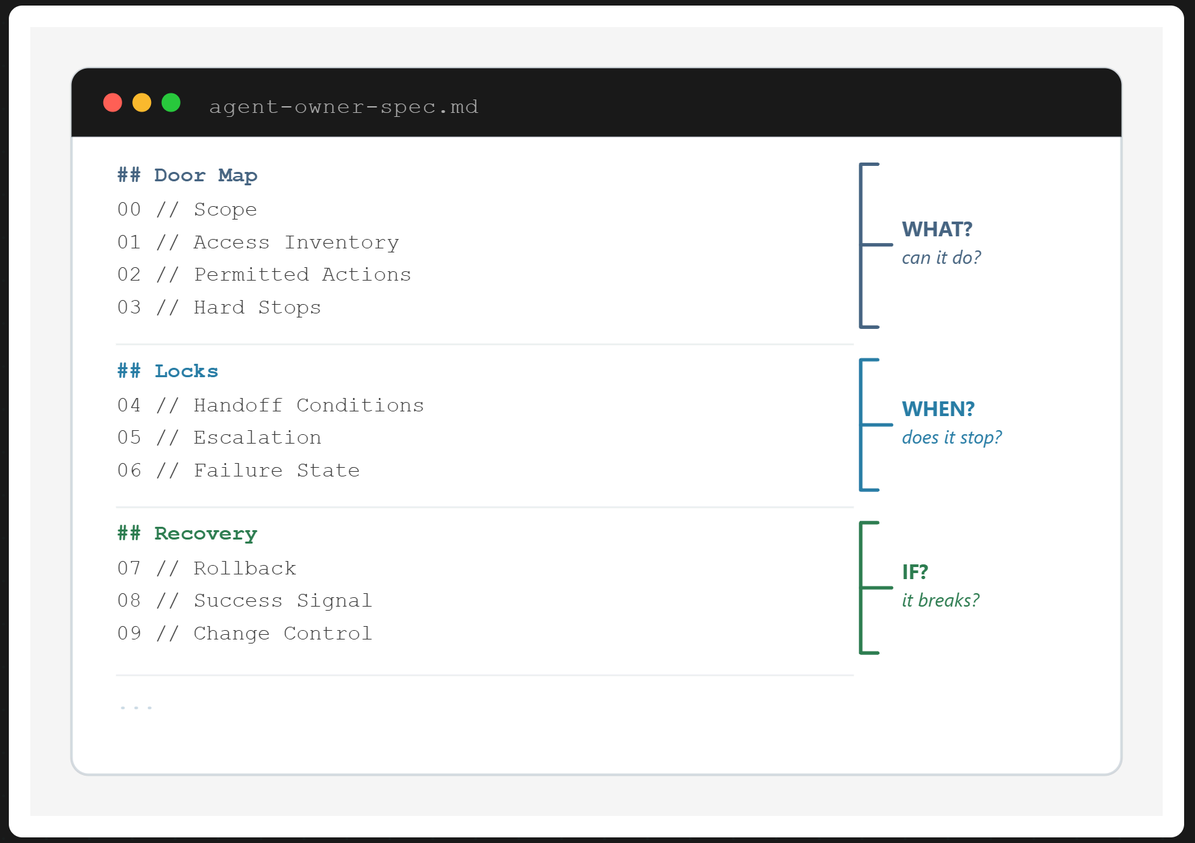

GROUP 3: RECOVERY

07 // ROLLBACK
who decides to roll back, when, and how. What gets restored.

08 // SUCCESS SIGNAL
working spec between deployments, observability

09 // CHANGE CONTROL
who can update the agent's scope, tools, instructions.

One spec. One owner. Every agent.

05 // LIVE DEMO

Support Ticket Auto-Triage

What happens when the agent auto-closes a ticket it should have escalated?

06 // TAKEAWAYS

You're already the Agent Owner

You're the one who knows if a decision is the hat, the haircut or the tattoo

Opportunity, not a technical barrier: claim it

Just another tool to get closer to the engineering team

The spec is how you stay in the room when you're not in the room.
